

Digital Publication & Copy Protection

Together in a Single Cost-effective Solution!

Performance with Peace-of-Mind

POWERFUL DIGITAL PUBLISHING SOLUTIONS WITH COMPLETE COPY PROTECTION UTILITIES - FROM MICROTECH AND HEXALOCK

Performance and Security in a Single Solution!

Sensitive information comes in many forms and from a host of industries and applications. From the privacy concerns of healthcare images, legal documents and financial records to the copyright-sensitive information distributed by business, government and educational facilities, the security and protection of organizational data has become a priority in today's global economy. So much so, that recent data storage and protection issues have brought about strict guidelines from regulatory agencies such as HIPAA, FCC, ISO and the SEC. These guidelines mandate specific rules and regulations when dealing with the storage and protection of records, images and other sensitive materials distributed on digital media.

The good news -- now there's a single solution that provides the cost-effective publishing and duplication you demand, with the copy protection and risk-avoidance you require -- together at a price point you deserve.

Microtech and HexaLock have combined powerful hardware and software technologies to enable a single solution for cost-effective digital publication and complete CD copy protection. By integrating HexaLock protection utilities with Microtech's family of digital publishing solutions, customers get the best of both worlds.

WHY MICROTECH SYSTEMS?

Microtech Systems is a premier provider of integrated CD-R/DVD-R and BD-R (recordable) publishing systems, required for producing and duplicating Optical Media (CD and DVD discs) with customized digital content and advanced printing technologies in an on-demand environment. Our powerful systems scale from high production volumes for enterprise applications to the mid and low-level requirements of small, departmental sized applications. Microtech integrated systems are backed by global service/support and training, enabling Microtech Systems to provide customers with a complete CD-R/DVD-R and BD-R publishing solution.

WHY HEXALOCK COPY PROTECTION?

HexaLock develops and markets copy protection and digital rights management solutions worldwide. HexaLock CD Copy Protection Software offers the latest in copy protection technology for both CD-ROMs and CD-Rs, including the ability to protect digital content. These innovative solutions for intellectual property protection offer content owners new and highly effective options to address their security concerns.
